DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 10 and 16-23 are rejected under 35 U.S.C. 102(e) as being anticipated by Iwanaga et al. (6,710,569).

Iwanaga et al. disclose a motor driving device and motor driving method in Figs. 1, 3, 7-16. A modulating input signal (CR 1 and CR2), a plurality of phases comprising a power switching device (TR 11 & 12, TR 21 & 22, TR 31 & 32), a controller (8A and 9), Figs. 8A and 8B show the time chart and Figs. 15 and 16 show the time windows of the two phases has pulses aligned with a different part of the respective time windows compared to other phases.

Allowable Subject Matter

3. Claims 2-9 and 11-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter: None of the cited prior art disclose or teach a control signal have pulses

Art Unit: 2838

substantially aligned with different end of the respective time window compared to other phases or the modulating input signal is an envelope of a signal for processing by a power amplifier and an output of the power supply forms a power supply for the power amplifier.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
